

GROWTHLIFT DIGITAL

Week 1 Guide

Dev Environment & Web Fundamentals

Your self-paced daily roadmap — follow the tasks, learn the links, ship the work.

Remote

Beginner Friendly

Self-Paced

WHAT YOU WILL LEARN THIS WEEK

- 01 Set up your complete developer environment (VS Code, Git, GitHub, Cursor AI)
- 02 Master HTML5 semantic structure — write code that means something
- 03 Style pages with CSS3 — Flexbox, box model, responsive design
- 04 Learn Git version control — commit, push, and manage your code
- 05 Understand agency workflow — naming conventions, folder structure, client mindset

YOUR 5-DAY JOURNEY

DAY 1

Setup

DAY 2

HTML5

DAY 3

CSS3

DAY 4

Flexbox

DAY 5

Git & Ship

WEEK 1 DELIVERABLES

- ◆ GitHub account set up + first repository created
- ◆ Personal landing page built with HTML & CSS (live on GitHub Pages)
- ◆ All Day 1–5 tasks marked complete on your tracker

Today is all about getting ready. No code yet — just set up your tools so you're ready to build from Day 2 onwards. Take your time, follow each step carefully.

YOUR TO-DO LIST — DAY 1

- ☐ Install **VS Code** — your main code editor
- ☐ Install the following VS Code Extensions:
 - Prettier (auto-formats your code)
 - Live Server (preview HTML instantly)
 - GitLens (see Git history inside VS Code)
 - ES7+ React Snippets (for later weeks)
- ☐ Install **Git** for version control
- ☐ Create a free account on **GitHub.com**
- ☐ Install **Cursor AI** — AI-powered code editor (free tier)
- ☐ Install **Node.js** (LTS version) — needed for React later
- ☐ Create a new folder on your desktop called **growthlift-internship**
- ☐ Open that folder in VS Code
- ☐ Create a file called **index.html** inside it — leave it empty for now
- ☐ Take a screenshot of your VS Code with all extensions installed
- ☐ Post your screenshot in the WhatsApp community with: "Day 1 Done 🟩"

LEARNING RESOURCES — DAY 1

VS Code Setup

code.visualstudio.com

Official site — Download the stable build

GitHub Signup

github.com

Create your free account — use a professional email

Cursor AI

cursor.com

Download and install the free tier — explore AI features

Node.js LTS

nodejs.org

Download the LTS (Long Term Support) version

MENTOR TIP

Don't skip the extensions. They will save you hours every week. Cursor AI is especially powerful — it writes code as you type. Think of it as your pair programmer.

HTML is the skeleton of every website. Today you will learn how to structure a page properly using semantic HTML5 — the way professional developers do it.

YOUR TO-DO LIST — DAY 2

- ☐ Watch the HTML5 Crash Course (link below) — take notes as you go
- ☐ Open your **index.html** file in VS Code
- ☐ Add the HTML5 boilerplate: **<!DOCTYPE html>**, **<html>**, **<head>**, **<body>**
- ☐ Inside **<body>**, add a **<header>** with your name as an **<h1>**
- ☐ Add a **<nav>** with 3 links: Home, About, Contact (use # for href)
- ☐ Add a **<main>** section with a **<section>** about yourself (3–4 sentences)
- ☐ Add an **** tag — use any free image from unsplash.com
- ☐ Add a **<footer>** with your name and "GrowthLift Intern 2026"
- ☐ Right-click index.html → Open with Live Server — view it in your browser
- ☐ Validate your HTML at **validator.w3.org** — fix any errors shown
- ☐ Commit your work: **git add .** → **git commit -m "Day 2: HTML structure"**
- ☐ Post a browser screenshot in the community with: "Day 2 Done 🟩"

LEARNING RESOURCES — DAY 2

HTML Full Course

youtube.com/@TraversyMedia

Traversy Media HTML Crash Course — 1 hr

W3Schools HTML

w3schools.com/html

Quick reference for every HTML tag

Validator

validator.w3.org

Check your HTML for errors instantly

Unsplash

unsplash.com

Free high-quality images for your pages

MENTOR TIP

Semantic HTML matters. A `<div>` for everything is a beginner habit — use `<header>`, `<main>`, `<section>`, `<footer>`. Google rewards it and your code becomes readable.

CSS makes your page beautiful. Today you will learn selectors, the box model, colors, fonts, and spacing — the visual building blocks of every website.

YOUR TO-DO LIST — DAY 3

- ☐ Create a new file called **style.css** in your project folder
- ☐ Link it inside <head> using: **<link rel="stylesheet" href="style.css">**
- ☐ Watch the CSS Crash Course (link below) — focus on selectors and box model
- ☐ Set a background color and text color for the whole page using **body {}**
- ☐ Import a Google Font (try "Inter" or "Poppins") and apply it to your page
- ☐ Style your **<h1>** — font-size, color, letter-spacing
- ☐ Add **padding and margin** to your <header> and <main>
- ☐ Style your **<nav> links** — remove underlines, change color, add hover effect
- ☐ Give your a **border-radius: 8px** and a **max-width: 100%**
- ☐ Style your **<footer>** — background color, centered text, padding
- ☐ Open Chrome DevTools (F12) and inspect your elements to understand spacing
- ☐ Commit: **git commit -m "Day 3: CSS styling applied"**
- ☐ Post screenshot in community: "Day 3 Done 🎉"

LEARNING RESOURCES — DAY 3

**CSS Crash Course**youtube.com/@TraversyMedia

Traversy Media CSS Crash Course — 90 mins

**Google Fonts**fonts.google.com

Free fonts — search Inter, Poppins, Roboto

**CSS Tricks**css-tricks.com

Reference for every CSS property explained

**DevTools Guide**developer.chrome.com/docs/devtools

Learn to inspect and debug with Chrome

MENTOR TIP

The box model (margin → border → padding → content) is the most important concept in CSS. Once you truly understand it, layout becomes logical — not guesswork.

Flexbox is how modern layouts are built. Today you will make your page look great on both desktop and mobile — a skill every client cares about.

YOUR TO-DO LIST — DAY 4

- ☐ Watch the Flexbox in 15 Minutes video (link below)
- ☐ Play Flexbox Froggy until you complete Level 24 (link below) — actually fun!
- ☐ Apply **display: flex** to your <nav> — space out the links using justify-content
- ☐ Create a new **<section class="cards">** with 3 card divs inside
- ☐ Style the cards section with **Flexbox: flex-wrap, gap, justify-content: center**
- ☐ Give each card a background, padding, border-radius, and a shadow
- ☐ Add a **@media query** for max-width: 768px — stack cards vertically on mobile
- ☐ Open DevTools → Toggle Device Toolbar (Ctrl+Shift+M) → test on iPhone SE size
- ☐ Make sure your page looks clean on mobile — adjust font sizes if needed
- ☐ Commit: **git commit -m "Day 4: Flexbox layout + responsive"**
- ☐ Post mobile screenshot in community: "Day 4 Done 🟩"

LEARNING RESOURCES — DAY 4

Flexbox in 15 Min

youtube.com/watch?v=fYq5PXgSsbE
Web Dev Simplified — quick and clear

Flexbox Froggy

flexboxfroggy.com
Game-based Flexbox learning — do all 24 levels

MDN Flexbox

developer.mozilla.org/en-US/docs/Web/CSS/CSS_Flexible_Box_Layout/Basic_Concepts_of_Flexbox
Complete Flexbox reference

Responsive Design

web.dev/responsive-web-design-basics
Google's guide to mobile-first design

MENTOR TIP

Every client project at GrowthLift is mobile-first. If a site looks broken on phone, it fails — no matter how good the desktop version is. Today's skill is non-negotiable.

Final day of Week 1. Today you will publish your page live on the internet and master Git basics — the tool every developer on earth uses daily.

YOUR TO-DO LIST — DAY 5

- ☐ Watch the Git & GitHub for Beginners crash course (link below)
- ☐ Open your terminal in VS Code (Ctrl + `) and configure Git:
- ☐ → **git config --global user.name "Your Name"**
- ☐ → **git config --global user.email "your@email.com"**
- ☐ Initialize your project as a Git repo: **git init**
- ☐ Stage all files: **git add .**
- ☐ Make your first proper commit: **git commit -m "Week 1 complete: HTML + CSS landing page"**
- ☐ Create a new repo on GitHub.com called **growthlift-week1**
- ☐ Connect and push: **git remote add origin [your-repo-url]** then **git push -u origin main**
- ☐ Go to repo Settings → Pages → Source: main branch → Save
- ☐ Wait 2 minutes → your site is now LIVE at **yourusername.github.io/growthlift-week1**
- ☐ Copy your live link and post it in the community: "Week 1 Delivered! 🎉"
- ☐ Review everything you built this week — be proud, you shipped something real

LEARNING RESOURCES — DAY 5

**Git & GitHub Crash**youtube.com/@TraversyMedia

Traversy Media — Git/GitHub for Beginners

**GitHub Pages Docs**docs.github.com/en/pages

Official docs for deploying with GitHub Pages

**Git Cheatsheet**education.github.com/git-cheat-sheet-education.pdf

Save this PDF — you will use it forever

**Git Visualizer**git-school.github.io/visualizing-git

See what git commands actually do visually

WEEK 1 COMPLETE — WHAT YOU ACHIEVED

- Developer environment fully set up (VS Code, Git, Cursor AI, Node.js)
- HTML5 semantic page built from scratch
- CSS styling applied with Flexbox layout and responsive design
- First project live on the internet via GitHub Pages

Git Commands & HTML Cheatsheet

ESSENTIAL GIT COMMANDS

- `git init` → Start a new Git repository in current folder
- `git add .` → Stage all changed files for commit
- `git commit -m "message"` → Save a snapshot with a description
- `git status` → See which files have changed
- `git log --oneline` → See commit history in short format
- `git push origin main` → Upload your code to GitHub
- `git pull` → Download latest changes from GitHub
- `git clone [url]` → Copy a GitHub repository to your machine

HTML5 SEMANTIC TAGS REFERENCE

- `<header>` → Top section — logo/nav
- `<nav>` → Navigation links
- `<main>` → Primary content area
- `<section>` → Grouped content block
- `<article>` → Self-contained content
- `<aside>` → Sidebar or related info
- `<footer>` → Bottom of page
- `<figure>` → Image with caption

CSS QUICK REFERENCE

- `color: #00C864;` → Text color using hex value
- `font-size: 16px;` → Text size in pixels
- `margin: 0 auto;` → Center element horizontally
- `justify-content: center;` → Center items along main axis
- `background-color: #050E08;` → Element background color
- `padding: 16px 24px;` → Inner space (top/bottom left/right)
- `display: flex;` → Enable Flexbox layout
- `border-radius: 8px;` → Rounded corners
